

# Interactive PDF Test Lab

Form controls, validation, calculations, visibility and reset actions.

**TEST TIP** Edit the fields, tab between them, and compare behavior across viewers.

## Text input

Required field flag

Display name \*

## Email validation

Validate event (AA /V)

Email

# Navigation & Action Types

GoTo and URI actions without JavaScript.

## WHY THIS PAGE EXISTS

These buttons exercise standard PDF action dictionaries and page destinations.

### Previous page

Navigates back to page 1

**/S /GoTo**

Previous page

### Open EmbedPDF

Opens <https://www.embedpdf.com>

**/S /URI**

Open embedpdf.com

### Next page

Navigates to page 3

**/S /GoTo**

Next page

## Action inspection checklist

Useful assertions for your parser/test suite

- Action subtype is parsed correctly
- Destination page reference resolves
- URI string is exposed without opening automatically
- Widget activation dispatches the action once

# Event Playground

Focus, blur and explicit JavaScript action experiments.

## Focus & blur

Widget AA /Fo and /Bl update the status field.

Click here, then click away

Tests widget focus lifecycle without relying on hover.

## Event status

Watch JavaScript-triggered state changes here.

Waiting for an event...

Expected: Focus (Fo), Blur (Bl), or button action.

## Explicit JavaScript action

Run a JavaScript action from a widget activation.

Run `app.alert()`

Back to first page

Tests /A -> /JavaScript dispatch independently of form calculations and validation.

## Document-level JavaScript fixture

The document also contains a named JavaScript entry in the Catalog /Names tree.

This script does not auto-run. It is included so parsers can discover and expose document-level scripts.

Name: EmbedPDFFixtureInit    Script: `var embedpdfFixtureLoaded = true;`
